

## ABSTRACT OF THE DISCLOSURE

Print image data which is image developed from PDL  
data of a document of which a specified page is  
previously marked by an insert mark set in a client  
5 computer 400 is held in an image server 200 so as to  
sequentially add optional scan insert originals to a  
designated page position of the document consisting of  
plural pages at arbitrary timing using a scanner  
function at an image server side also for originals of  
10 which data is not previously digitized without  
converting original data into raster image data at a  
client side, and data of insert originals is input in  
real time by a scanner in a digital color copying  
machine then the data is print output to a page  
15 designated by the marking when the print image data is  
print output from the digital color copying machine.
